

Sample ROCS Module — Fictional Test Fixture

This is a synthetic test fixture, not a real FedEx document.

The Sample Routing Module governs how the Sample Engine assigns fictional stops to fictional vehicles. It uses heuristic SAMPLE-A by default and falls back to SAMPLE-B when stop windows conflict.

Error code SAMPLE-001 indicates the engine could not reconcile stop windows for a given vehicle. To resolve, planners should verify the stop manifest in the Sample Manifest screen and rerun the routing step. Error code SAMPLE-002 indicates a missing vehicle capacity profile; planners must populate the profile in the Sample Fleet screen.

This document exists solely to exercise PyPDFLoader in tests.
